

“I’m fed up with constantly managing desktop PC’s”

This is one of the most common issues that we come across when we are speaking with our customers about running their IT.

It’s a fact that a PC is 3 to 5 times more costly to manage than buy!

Security
Service packs
Bugs and glitches
New versions of applications
Anti-Virus

"We are impressed with Kaviza's functionality, speed, and ease-of-use, and the cost savings are phenomenal — Kaviza is 1/6th the cost of alternatives."
-- Steve Armstrong, SSD Drives Senior Support Analyst.

These are the most common, (but by no means all), headaches that companies have in trying to manage their PC’s. Couple this with the need for Remote Access, rolling out Windows 7, Office 2010, and most businesses are faced with a real challenge, and feel there MUST be a better way to do all that.

Well there is, with Unique and Kaviza VDI-in-a-Box!

- Imagine being able to provide every user a fresh, clean copy of windows every time they logged on.
- Imagine being able to deploy Windows 7 or Office 2010 in minutes not days!!
- Just think about what it would mean to you to be able to access your full Windows desktop from ANYWHERE, on almost ANY device..Ipad,...iPhone... Android Mobile....Web café...Hotel....Home....Train.
- Think about being able to provide built in disaster recovery and business continuity too!!

And Imagine being able to do all this for Less than a PC costs!!

Unique Network Solutions specialise in providing “virtual” desktop PC technology to all types of business from 10-1000 users. We do this using industry standard Servers, with no need for expensive SAN or storage solutions, expensive licensing or any of the other obstacles usually associated with Virtual Desktop technology.

The solution scales using the same, commodity servers, and provides immediate ROI, unlike some solutions that take up to 3 years to repay themselves.

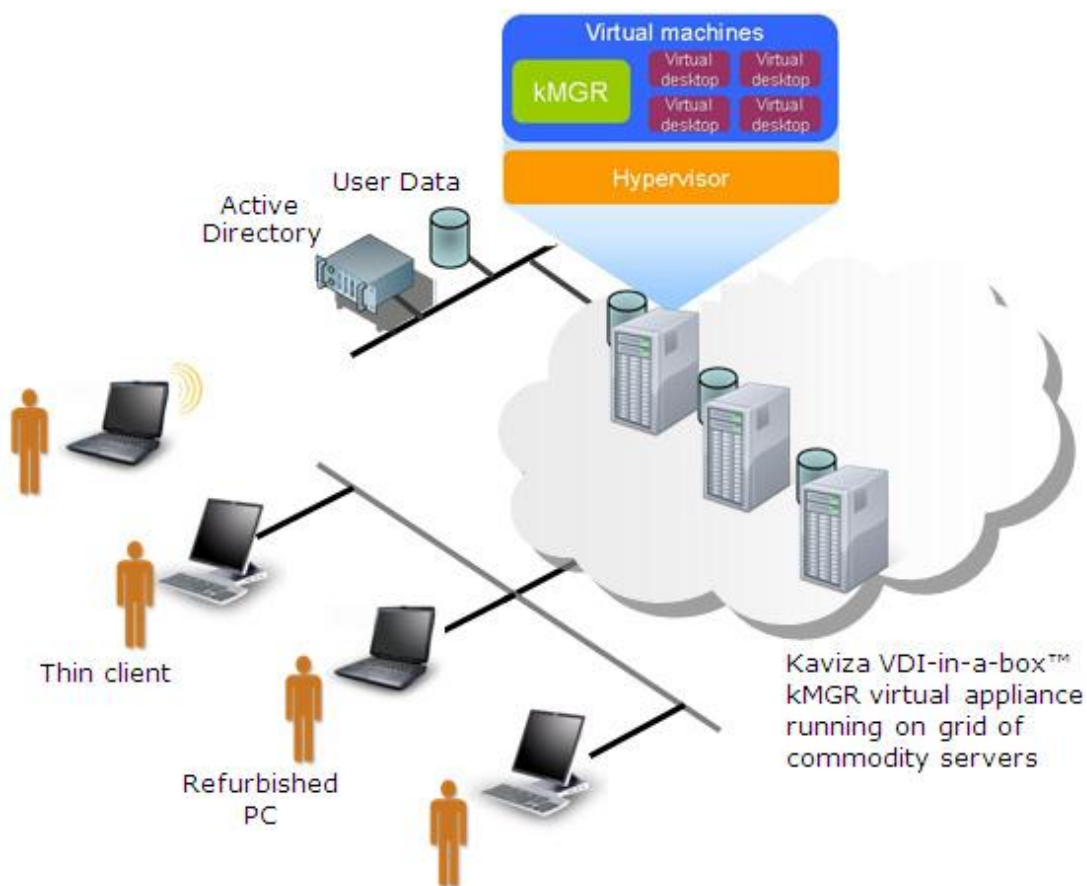

You can also repurpose your existing PC’s, so it can delay having to replace those PC’s just because they are due, or maybe because you want to move to Windows 7 or new more powerful applications.

We remove the three main roadblocks to VDI solutions.

Cost: Using industry standard commodity Servers and delivering high availability as standard, the total cost per desktop can be below £600. Immediate ROI can be delivered on anything over 25 desktops.

Complexity: An all in one turnkey solution that's fast to implement and easy to scale. It can use your existing PC's, so you don't have to replace them just because Windows 7 has arrived. Alternatively it can use inexpensive Thin Client devices from as little as £200.

Rich User Experience: Leveraging high definition technologies we deliver an experience to rival the desktop PC.

Simply put, we provide the future for desktop computing. We allow our clients to move away from the constant roundabout of PC management and replacement, and let them regain control over their Desktop user base.

And all for less than the cost of that replacement PC!
